Amendments to the Specification:

Please replace the paragraph at page 2, lines 16-20 with the following amended paragraph:

In addition, in the case of turning the delay locked loop on or off in response to the operation mode of the semiconductor memory device, all portions of the delay locked loop are turned on or off. However, since some portions of the delay locked loop do not need to be turned on or off, turning all portions on or off unnecessarily increases the current consumption of the semiconductor memory device.
